

BenPal™

Let our technology add a new dimension to your pension plan

The BenPal pension modeller from JLT is a powerful, online planning tool that works for **both DB and DC** benefits.

Plug it in, energise your scheme, empower your people.

“The key to improving engagement with pension members is giving them more access to something personalised and tangible. Our new modeller can be used by all members, active and deferred, whatever scheme they are in.”

Jim Carlton
Managing Director
JLT Online Benefits

DB/DC

The BenPal modeller works with any type of pension scheme, including DB, DC, hybrid and GPP/Stakeholder plans.

Every member can enjoy 24/7 online access to the same planning tool, configured for their particular scheme and pre-populated with their own personal and benefits data.

The simple but effective interface can be understood by every member and the powerful calculation engine means it can still satisfy those who want to do more complex modelling on a regular basis.

Education

The modeller encourages employees to take more interest in their company pension scheme and the possible benefits it might provide for their retirement. They can add pensions from previous employments to see their projected income from all sources.

It is designed to be a tool that members want to play with, and keep using time and again. The impact on projected benefits of investing more or less, or taking benefits earlier or later, can be seen instantly. Helpful messaging takes everyone up a learning curve at their own pace.
